Catalogue: std-shp1

Description: Encode Sheep DNA

DNA from Sheep (Ovis aries) 100 % tissue

SIZE– 1500 ng /100 µl

Product Description:

Each vial contains 100 µL of DNA purified from 100 % Sheep (Ovis aries) tissue.

The solution is provided 15.00 ng/ µl Concentration.

The products shall be intended for research only. It can be used in PCR, qPCR and dPCR based experiments, sequence analysis, southern blot, MLST. This product can be used a reference material / standard for identification of Sheep Meat.

Stability:

When stored under the recommended conditions, the material is expected to remain stable. Tests carried out at encode innovations to check the effect of one additional freeze-thaw cycle in a similar meat species material showed no significant change. However, freeze-thaw cycles should be avoided to prevent changes in the extraction profile.

Storage:

Vial should be stored frozen, at (-20 ± 10) °C. Freeze-thaw cycles should be avoided to prevent changes in extraction profile.

Shelf Life:

12 Months from the date of manufacturing.
